

Matias Agado

San Francisco, CA | mfagado1@dons.usfca.edu | 1 (760) 458 4661 | linkedin.com/in/matiasagado | github.com/matiasagado

PROFESSIONAL SUMMARY

Full-stack software engineer with hands-on experience building and shipping production web applications, working directly with users, and translating feedback into product improvements. Skilled in TypeScript, React, Next.js, Python, and PostgreSQL, with a background spanning systems programming, AI tooling, and SaaS product development.

EDUCATION

University of San Francisco

Bachelor of Science in Computer Science.

Dec 2025

Relevant Coursework: Data Structures and Algorithms, Full-Stack Web Development, Software Development, Foundations of AI, Computer Architecture, Operating Systems, Linear Algebra & Probability, Discrete Math

EXPERIENCE

AI Training Fellow

April 2026 – Present

Handshake AI

Remote

- Partner with AI researchers to test LLM outputs and deliver structured feedback to improve model accuracy and usefulness.
- Design targeted prompts to surface model failure modes in specific domains and document findings in actionable reports.
- Evaluate AI responses for accuracy, consistency, and practical usefulness across a range of tasks and topics.

Server

March 2024 – March 2026

McCalls Catering

San Francisco Bay Area, CA

- Delivered white-glove service at events with 100+ guests where every detail mattered with zero margin for error.
- Built rapport quickly with clients and coordinated with event operations teams to maintain seamless, high-quality service.

PROJECTS

Foothold

April 2026 – Present

TypeScript, Next.js, PostgreSQL, Supabase, Prisma

- Designed and built a full-stack SaaS platform to help students discover organizations, events, and campus communities, with the complete frontend and system architecture implemented.
- Conducted user discovery interviews with student organizations to identify campus engagement challenges and translated findings into a formal PRD and prioritized feature roadmap.
- Architected system design including user flows, database models, and backend workflows using Prisma, Supabase, and Next.js, documented in a structured architecture map.
- Managed end-to-end product lifecycle spanning design, development, and pre-launch validation strategy.

AI Log Analysis System

Sept 2025 – Dec 2025

Python, Go, SQL, Docker, LLM Integration

- Built a real-time log analysis system that processed thousands of security logs and flagged threats automatically.
- Designed a dashboard to visualize system health and activity, improving developer visibility.
- Analyzed model performance data to compare outputs and support data-driven decision making.

RISC-V CPU Emulator

April 2025 – May 2025

C, RISC-V Assembly, Systems Programming

- Built a functional CPU emulator modeling a 32-bit processor with a full register file, simulating hardware behavior in software.
- Implemented an instruction decoder that parses RISC-V machine code into opcodes, registers, and immediates.
- Designed a memory address mapping system for instructions and data storage, mirroring hardware-level memory management.

Search Engine

Jan 2024 – May 2024

Java

- Built an inverted index search engine capable of processing and indexing 10,000+ documents using multithreaded architecture.
- Improved query response time and throughput through algorithmic optimizations and thread management.

SKILLS

Technical Skills: TypeScript, React, Next.js, Python, PostgreSQL, Prisma, Supabase, Docker, Git, HTML, CSS, Java, C, Go, Claude Code

Soft Skills: Analytical Thinking, Collaboration, Communication, Scrum, Adaptability, Consultative Selling
